The A Series engines are a family of inline-four internal combustion engines with displacement from 1.3 L to 1.8 L produced by Toyota Motor Corporation. The series has cast iron engine blocks and aluminum cylinder heads. To make the engine as short as possible, the cylinders are siamesed. The original 1A engine was only 550 mm (21.6 in) long. The development of the series began in the late 1970s ...

Toyota A engine - Wikipedia

When the logic is satisfied to make the relay in the control box close, then 5A is connected to the battery 24V+ post. So it can either provide a signal to the alternator (as in the case of the 200A Niehoff) or carry the charge for the batteries for the lower-amp alternators.

In fact, the system actively manages its output so that the engine is always running at its most fuel efficient. High Output Alternators For fast and efficient charging, most conventional marine alternators do not manage the constant, high-load output required by lithium batteries and large AGM bank systems.
