Legionella | For Laboratories | Legionnaires | CDC

The definitive laboratory method of confirming the presence of the disease is by culturing viable cells of Legionella from sputum, bronchial washing, or autopsy on special media. Further identification of the cultured cells will identify the species and serogroup. Special tests may determine subtype of certain isolates.

OSHA Technical Manual (OTM) | Section III: Chapter 7 ...

Legionella pneumophila antigen—this is the preferred initial test for Legionnaires disease. It detects one of the bacterium's proteins. It is performed on urine and occasionally on another body fluid. It is a rapid way to detect an infection, but it will only detect Legionella pneumophila serogroup 1. Since this is the most common cause of Legionnaires disease in the U.S., it will detect most infections in adults.
