Adiabatic Shear Localization Second Edition
The second edition of the book on adiabatic shear localization (ASL) of Y. Bai and B. Dodd is definitely a worthy descendant of the first edition.

Description Adiabatic shear localization is a mode of failure that occurs in dynamic loading. It is characterized by thermal softening occurring over a very narrow region of a material and is usually a precursor to ductile fracture and catastrophic failure.

Adiabatic Shear Localization - 2nd Edition
Bradley Dodd, Yilong Bai, In Adiabatic Shear Localization (Second Edition), 2012 1.7 Summary Now, it appears that adiabatic shear localization is a prototype of band-like structures and is merely a small window in the broad area of localization emerging from a uniform field.

Adiabatic Shear - an overview | ScienceDirect Topics
314 Adiabatic Shear Localization there exists a second homogeneous region at high-deformation rates even well below the glass transition (lying in the top-right corner of the Spaepen map). They explained that ‘Homogeneous II’ with no flow serrations occurs when deformation rates exceed the characteristic rate for shear-band nucleation.

Introduction to Adiabatic Shear Localization
Shear localization or banding due to thermal softening does not require truly adiabatic (i.e., no heat flow) conditions. All that is required is a condition in which enough heating occurs. The term catastrophic thermal shear covers this. It focuses more on the observed behavior, less so on its cause.

Adiabatic shear banding (ASB) is a shear localization process which develops under high loading rate as the result of the competition between hardening and softening mechanism, see e.g. Bai and...

Introduction to Adiabatic Shear Localization (revised edition)
It is clear from the expression of $\dot{\epsilon}$ that in adiabatic conditions the shear band width would tend to zero and in finite element calculations it would localize in a single element.
