Macular degeneration, also known as age-related macular degeneration (AMD or ARMD), is a medical condition which may result in blurred or no vision in the center of the visual field. Early on there are often no symptoms. Over time, however, some people experience a gradual worsening of vision that may affect one or both eyes.

Macular degeneration - Wikipedia

Macular degeneration is an eye disease and is the most common type of macular damage in adults. Because the disease develops as a person ages, it's often called age-related macular degeneration (AMD). AMD is the leading cause of vision loss in people over the age of 50 in the United States,

File Type PDF Age Related Macular Degeneration A **causes - Mayo Clinic**

Age-related macular degeneration (AMD) is a common condition that affects the middle part of your vision. It usually first affects people in their 50s and 60s. It doesn't cause total blindness. But it can make everyday activities like reading and recognising faces difficult. Without treatment, your vision may get worse.

The biggest risk factor for Macular

Degeneration is age.

Your risk increases as you age, and the

disease is most likely to occur in those 55

and older. Other risk factors include:

Genetics - People with a family history of AMD are at a higher risk.

What is Macular

File Type PDF Age Related Macular Degeneration? -

AMDF

Age-related macular degeneration (AMD) is a problem with your retina. It happens when a part of the retina called the macula is damaged. With AMD you lose your central vision. You cannot see fine details, whether you are looking at something close or far.

File Type PDF Age Related Macular Degeneration A

Age is a prominent risk factor for age-related macular degeneration. The risk of getting advanced age-related macular degeneration increases from 2% for those ages 50-59, to nearly 30% for those over the age of 75. Macular degeneration is expensive, and will only become more expensive as the population aged 65 and older increases.
