Algorithms In A Nutshell In

Algorithms in a Nutshell is exactly that. A book that has just the right amount of theory and math to quickly help you find the solution to an every day problem. Years ago I attended WPI, and took an Analysis of Algorithms class from Stanley Selkow. Stanley taught an excellent course that went beyond the topics in this book.

An 'in a nutshell' explanation. Algorithms are in everything we do. But for those that aren't inclined toward maths and programming, the term 'algorithm' is less than clear. (In fact, the joke runs that developers use the word 'algorithm' when they don't want to explain what they've done.) So, you might have heard the term before, even used it.

2. Support Vector Machine. Support Vector Machine (SVM) is a supervised learning algorithm and mostly used for classification tasks but it is also suitable for regression tasks.. SVM distinguishes classes by drawing a decision boundary. How to draw or determine the decision boundary is the most critical part in SVM algorithms.
