astronomical objects, such as stars, galaxies, and nebulae.

Astronomers have gathered a wealth of knowledge about the universe through hundreds of years of painstaking observations. These observations are interpreted by the use of physical and chemical laws familiar to mankind.

Astronomy and Astrophysics: Jain ...

That's actually how it got started — by people looking at the sky and charting what they saw. "Astronomy" comes from two old Greek terms astron for "star" and nomia for "law", or "laws of the stars". That idea actually underlies the history of astronomy: a long road of figuring out what objects in the sky are and what laws

observations of the heavens conducted by our early human ancestors. Historical records of astronomical measurements date back as far as Mesopotamia nearly 5000 years ago, with later observations made by the ancient Chinese, Babylonians, and Greeks. Humans seek to explain their world with (internal) models; one of the earliest is that the
