A greatly enlarged second edition (Cambridge, 1959) published
in two volumes took full account of developments in
trigonometric series, Fourier series, and related branches of pure
mathematics since the publication of the original edition. These
two volumes, bound together with a foreword from Robert
Fefferman, outline the significance of this text.

S. L. Loney - Wikipedia

Trigonometry in the modern sense began with the Greeks. Hipparchus (c. 190–120 bce) was the first to construct a table of values for a trigonometric function. He considered every triangle—planar or spherical—as being inscribed in a circle, so that each side becomes a chord (that is, a straight line that connects two points on a curve or surface, as shown by the inscribed triangle ABC in ...
