PhasesMoonSE_Key - for site.doc - Phases of the Moon Answer...

The lunar phase or Moon phase is the shape of the directly sunlit portion of the Moon as viewed from Earth. The lunar phases gradually change over the period of a synodic month (about 29.53 days), as the orbital positions of the Moon around Earth and of Earth around the Sun shift. The Moon's rotation is tidally locked by Earth's gravity; therefore, most of the same lunar side always faces Earth.

Lunar phase - Wikipedia

Half of the moon is always in shadow and half is always illuminated, but we perceive different phases based on the moon's position in relation to us. Full The moon is said to be in full phase (and is known as a "full moon") when the illuminated half of the moon is fully in position for us to see it.

What Causes Phases of the Moon? | Sciencing

PHASES OF THE MOON DEFINITION The portion of the moon that we can see from Earth on any given night is called the moon's phase. As the moon orbits around the Earth, sunlight is reflected off the moon's surface and that light reaches us on Earth. The phase of the moon depends on where the moon is in its orbit.
