Studying bats provides ideas for preserving tropical biodiversity . . . Although bats were the focus of the latest BCI workshop, many fauna and flora will benefit in the near future. In the first of a soon-to-be-annual series of forest management workshops last September, professionals from across Venezuela spent six days studying new approaches to logging that will benefit bats and protect the biodiversity of tropical forests.

Forest bat populations are rapidly declining, and one or more species may soon be reclassified as endangered. If reclassified, the U.S. Fish and Wildlife Service provides the opportunity to develop a Habitat Conservation Plan (HCP). An HCP helps endangered species recover by conserving their habitat during land management activities.

Forest regeneration plays a key role in conservation. Healthy populations of birds and bats are needed to help disperse seeds. Fruit-eating bats are one of the most important seed dispersers in the tropics and we're lucky to have 25 species of them in Osa! Lots of bats equals more forest regeneration and increased plant biodiversity.
