The transradial approach (TRA) was introduced for the first time in 1989. 1 Used at first by Campeau for coronary angiography, the TRA was later applied by Kiemeneij et al. for percutaneous coronary intervention (PCI). 2 The radial artery has proven to be a challenging but safe route towards the coronary arteries. According to the European Society of Cardiology (ESC) guidelines, the radial ...

## **Transradial Approach In Primary Percutaneous Coronary ...**

Best practices for reducing potential radiation exposure to patient and operators. To reduce the risk of exposure to radiation during a transradial procedure, the patient's accessed arm should be placed next to his or her torso, additional extension tubing should be used, and operators should be cognizant of safe radiation protocols.

## **SCAI Statement Defines Best Practices for Transradial ...**

During the 25 years since the first report of successful coronary catheterization via the radial artery, 1 transradial access for catheterization and intervention has evolved from a trendy idea with sporadic adoption to a routine practice and standard of care. Following on the heels of small series and meta-analyses suggesting a reduction in bleeding and access site complications, larger ...

## **Managing Complications of Transradial Catheterization ...**

Use of the contralateral radial access makes good sense if we believe in TRA. Switching to the femoral for TRA failure should be done if both arms are impassable due to bilateral tortuosity, radial loops, or calcific arm arteries (e.g., Monkenberg's medial sclerosis).
