### Chapter 16: The Molecular Basis of Inheritance

16. Distinguish between the structure of pyrimidines and purines. Explain why adenine bonds only to thymine. Adenine and guanine are purines, nitrogenous bases with two organic rings, while cytosine and thymine are nitrogenous bases called pyrimidines, which have a single ring. Thus, purines are about twice as wide as pyrimidines. A purine-

### Chapter 16: Molecular Basis of Inheritance

Chapter 16 The Molecular Basis of Inheritance Lecture Outline . Overview: Life's Operating Instructions. In April 1953, James Watson and Francis Crick shook the scientific world with an elegant double-helical model for the structure of deoxyribonucleic acid, or DNA. Your genetic endowment is the DNA you inherited from your parents.

Bio2600: Introduction to Cell Biology Study Guide Chapter 16 Answers 16-1 Cells can signal to each other in various ways. A signal that must be relayed to the entire body is most efficiently sent by endocrine cells, which produce hormones that are carried throughout the body through the bloodstream. On the other hand, contact-dependent methods of cell signaling do not require the release of a secreted molecule and are used for very localized signaling events.

Question 16 - Chapter 16: Prokaryotes: The building of CO2 in the atmosphere resulting from the burning fossil fuels is regarded as a major contributor to global warming (see module 38.3). Diatoms and other microscopic algae in the oceans counter this buildup by using large quantities of atmospheric CO2 in photosynthesis, which requires small quantities of iron.
