What is Diabetes Insipidus: Prognosis and Life Span

Diabetes insipidus (die-uh-BEE-teze in-SIP-uh-dus) is an uncommon disorder that causes an imbalance of fluids in the body. This imbalance makes you very thirsty even if you've had something to drink. It also leads you to produce large amounts of urine. While the terms "diabetes insipidus" and "diabetes mellitus" sound similar, they're not related.

Diabetes insipidus - Symptoms and causes - Mayo Clinic

Central diabetes insipidus (CDI) is the end result of a number of conditions that affect the hypothalamic neurohypophyseal system. The known causes include germinoma/craniopharyngioma, Langerhans cell histiocytosis (LCH), local inflammatory, autoimmune or vascular diseases, trauma resulting from surgery or an accident, sarcoidosis, metastases and midline cerebral and cranial malformations.

Case Discussion on Central Diabetes Insipidus | Epomedicine

Case Study - Diabetes Insipidus. A 19 yr old undergraduate nursing student who is working part-time as a CNA. Lately she realizes that she has to go to the bathroom very frequently - almost every hour- and that she is drinking more than 5 L of water a day. She goes to see her NP, who finds her physical exam to be normal, with a BP of 105/70 and a HR of 85 bpm.

Case Study - Diabetes Insipidus Flashcards | Quizlet

In case of inadequate thirst, desmopressin is the drug of choice. Pharmaceutical therapy for diabetes insipidus includes subcutaneous, nasal, and oral preparations of vasopressin analogues, as well as chlorpropamide, carbamazepine, clofibrate, thiazides, and indomethacin (limited efficacy).

Case Study 3: Diabetes Insipidus Flashcards | Quizlet

When nephrogenic diabetes insipidus is caused by mutations in the AQP2 gene (about 10% of the inherited cases of nephrogenic diabetes insipidus), it can have either an autosomal recessive or, less commonly, an autosomal dominant pattern of inheritance. I In autosomal recessive inheritance, both copies of the gene in each cell have mutations.

Nephrogenic diabetes insipidus | Genetic and Rare Diseases ...

The cause of diabetes insipidus is problems with antidiuretic hormone (vasopressin). Either the body does not make enough which affects the balance of fluids in the body, or the body produces adequate amounts but the kidneys do not respond to it. The cause of most cases of central diabetes insipidus is unknown.
