Foundation of Business: How to ...

Remember, while it may be difficult, you know that building deep service and deep value into a product is possible. You've experienced it in your own life. In the end, value isn't some vague concept. Value is simply being of service. Something has value as long as it is able to serve. In this sense, value is the potential to serve. When you build products based around serving your customer mission, you can't help but create value.

The Key to Creating Value in Business

In value engineering, value is defined as a function divided by cost. Concentrating on the maximizing the project's function while minimizing cost generates the greatest value for our clients. An important part of the value engineering planning process is the workshop.

“Make the value-creating steps occur in tight sequence so that the product or service will flow smoothly toward the customer,” advises LEI. This may require breaking down silo thinking and making the effort to become cross-functional across all departments, which can be one of the greatest challenges for lean programs to overcome.

5 Lean Principles Every Engineer Should Know - ASME

The term experiment is defined as the systematic procedure carried out under controlled conditions in order to discover an unknown effect, to test or establish a hypothesis, or to illustrate a known effect. When analyzing a process, experiments are often used to evaluate which process inputs have a significant impact on the process output, and what the target level of those inputs should be to ...
