DNA fingerprinting in plants is used for protection of the ecosystem, identification of marker traits, gene diversity and variation, and mutations. There are various methods for plant DNA fingerprinting like Restriction Fragment Length Polymorphisms (RFLPs), Randomly Amplified Polymorphic DNAs (RAPDs), Amplified Fragment Length Polymorphism (AFLP), and Simple Sequence Repeats (SSRs).

DNA Fingerprinting in Plants - Biology Wise

Breeders conventionally use the phenotype to evaluate the genotype of a plant or an animal. As it is difficult to make out homozygous or heterozygous dominance from appearance, the DNA fingerprinting allows a fastidious and precise determination of genotype.

Abstract. Advances in knowledge about the molecular structure of plant genome and development of techniques to rapidly characterise genomic variations have established DNA fingerprinting as a powerful tool for identifying plant species, varieties, clones, individuals and even plant products. This article provides details of DNA polymorphism in plants and classical and more recent molecular marker techniques based on restriction fragment length polymorphism (RFLP), polymerase chain reaction ...

DNA fingerprinting in plants : principles, methods, and ...

DNA fingerprinting, also called DNA typing, DNA profiling, genetic fingerprinting, genotyping, or identity testing, in genetics, method of isolating and identifying variable elements within the base-pair sequence of DNA (deoxyribonucleic acid). The technique was developed in 1984 by British geneticist Alec Jeffreys, after he noticed that certain sequences of highly variable DNA (known as minisatellites), which do not contribute to the functions of genes, are repeated within genes.

DNA fingerprinting | Definition, Examples, & Facts ...

DNA fingerprinting techniques such as restriction fragment length polymorphism (RFLP) and random primer polymorphism amplification detection (RAPD) have been described as powerful molecular typing methods for microorganisms (1). RFLP requires large amounts of genomic DNA, defined nucleic acid probes and laborious hybridization procedures.
