Hand sanitizer is a liquid, gel, or foam generally used to decrease infectious agents on the hands. In most settings hand washing with soap and water is generally preferred. Hand sanitizer is less effective at killing certain kinds of germs, such as norovirus and Clostridium difficile and unlike soap and water, it cannot remove harmful chemicals. People may incorrectly wipe off hand sanitizer ...

Manufacture and sell detergents, cleaners and chemical products. There are so many "how to's", formulations and recipes for manufacturing cleaning and chemical products, green cleaning goodies, bath soap and carpet shampoo, it seems an overwhelming and daunting task to find the best solution.

### **Manufacture Detergent and Cleaning Products**

The first soap and detergent makers used plant ashes to produce alkalis. Today they are chemically produced by running electricity through salt water to produce sodium hydroxide (NaOH) or caustic soda and potassium hydroxide (KOH) or caustic potash. These are the most commonly used alkalies in soaps and detergents.
