DATABASE SYSTEMS Exercise 1.1 Why would you choose a database system instead of simply storing data in operating system files? When would it make sense not to use a database system? Answer 1.1 A database is an integrated collection of data, usually so large that it has to be stored on secondary storage devices such as disks or tapes. This data can

## **Fundamentals of database systems - Course Introduction**

Users can insert new information into the database, and delete, change, or retrieve existing information in the database, by issuing requests or commands to the software that manages the database—which is to say, the database management system (DBMS for short).
