I have used several power and sample size programs. My favorite is G*Power. G*Power was created by faculty at the Institute for Experimental Psychology in Dusseldorf, Germany. It offers a wide variety of calculations along with graphics and protocol statement outputs. Best of all, it is free! The developers released version 3.1.9 in 2014.

We will run three calculations with power equal to 0.7, 0.8 and 0.9. Making use of the 'X-Y plot for a range of values' button and denoting power as the independent variable y ranging from 0.7 to 0.9 in steps of 0.1: This gives us a range of sample sizes ranging from 109 to 184 depending on power.
