Dynamic geometry is active, exploratory geometry carried out with interactive computer software. The papers in this volume are intended to convince readers that dynamic geometry is full of action, energy, and even hype - the hype of excited individuals (students, teachers, researchers) who can't help but

Interactive geometry software (IGS) or dynamic geometry environments (DGEs) are computer programs which allow one to create and then manipulate geometric constructions, primarily in plane geometry. In most IGS, one starts construction by putting a few points and using them to define new objects such as lines, circles or other points. After

In mathematics, a dilation is a function from a metric space into itself that satisfies the identity  $d((\cdot), (\cdot)) = k \cdot d(\cdot, \cdot)$  for all points  $(\cdot)$ , where  $(\cdot)$  is the distance from  $(\cdot)$  to  $(\cdot)$  and  $k$  is some positive real number.. In Euclidean space, such a dilation is a similarity of the space. Dilations change the size but not the shape of an object
