MCUFRIEND_kbv - Arduino Libraries

Hello, I took the plunge (after much hesitation regarding self-inflicted wounds) and true to form ran into an issue immediately with the 2.4" TFT HAT on UNO R3.. I uploaded the drawBitmap_kbv code to the UNO and the Serial Monitor displayed the following information (I added the width & height print to the sample because the screen flashes momentarily but does nothing else):

2.4" TFT on UNO R3, Width=0 · Issue #103 · prenticedavid ...

Arduino TFT Touch Screen Calculator (MCFRIEND) Below code is for your understanding and matching with the examples from MCFRIEND_KBV example libraries, it will only show the keys. This is how the keyboard is drawn, you can change the colors, tweak. void loop() is empty. The code actually not respond to touch, it is only for checking the keys :

Arduino TFT Touch Screen Calculator (MCFRIEND) : Part 1

The Adafruit_GFX library provides the generic code that would be needed to control any display. So all the MCFRIEND_kbv library has to do is provide the code to interface with the specific hardware of the mcurfriend Shields. So all that nice documentation on the Adafruit website applies to the MCFRIEND_kbv library.

MCUFRIEND line width adjustment for tft.drawRoundRect ...

It should work out of the box with MCFRIEND_kbv library. There were some early shields with RM68140 that had the wrong hardware interface settings. The current shields have the correct interface.
