### Immune System Answers

Immune System This category is for questions about how our bodies identify and fight off disease, infection or pathogens through specialized cells, tissues and organs.

### Answers about Immune System

White blood cells make antibodies that release histamines (chemicals that cause sneezing, itching, watery eyes). The histamine attaches to receptors that tell the body to start an allergic reaction. Although it is an overreaction, it is a good thing since it is showing that your immune system is actually working.
