One-fifth of human genes in the U.S. have been patented. 18 Indigenous groups are opposed to the idea of patenting genetic sequences because genetic sequences are part of a life form which cannot be claimed as invented. Biotechnological inventions resulting from genetic materials may be financially lucrative to researchers and patent holders, but rarely benefit the individual or community from whom the DNA is taken.

...

By Iiddá (Melissa Stroud) The genetic origin of the Sámi people is complex and difficult to trace. Their beginnings are closely linked with the origin of the Finns. Both groups speak a Finno-Ugric language that causes them to be singled out among their Indo-European neighbors and associated historically with each other.
