Infection Control In Orthodontics By

Effective Principles of Infection Control in Dental Offices Handwashing. You know how important gloves and washing your hands are to maintain hygiene. But were you aware that cold water is preferable to hot water? According to the Journal of Orthodontics and Endodontics, hands should be washed in cold water with germicidal soap for at least one minute. Hot water is not ideal because it may cause pores to open and remove skin oils.

Infection control is nothing new to orthodontic practice; we, as orthodontic professionals, have always prioritized the safety of our patients. All dental professionals have been trained to provide care for patients with known and unknown transmissible viral and bacterial diseases. Rest assured that we will continue to practice universal infection control once we are allowed to re-open.
