Reliable and efficient moisture protection with Kaeser compressed air dryers

Compressed air contains water vapor and as it travels through compressed air piping, it cools and the vapor condenses into liquid condensate. This condensate increases maintenance requirements and affects product quality.

dryers ensure stable pressure dew points in all load phases. Dried compressed air can cool to a temperature of + 3°C (= achievable pressure dew point) without the moisture in the air condensing. Even at higher ambient temperatures, this ensures optimal protection for downstream compressed air systems and consumers.
