### Keeping The Bees Why All

But that's not all-bees are responsible for up to one-third of our food supply, and the consequences of not taking action to protect them are frightening. While the media focuses on colony-collapse disorder and the threats to honey bees specifically, the real danger is much greater: all bees are at risk, whether it be from loss of habitat, pesticide use or disease, among other factors.

### Keeping the Bees: Why All Bees Are At Risk And What We Can ...

A world without bees would be much less colourful, with fewer plants and flowers. But that's not all -- food would be in much shorter supply, and available in much less variety. While the media focuses on colony-collapse disorder and the threats to honey bees specifically, the real danger is much greater: all bees are at risk.

Keeping bees away can be as simple as watering your lawn. Obviously, this home remedy is only effective on ground dwelling bees, but it is quite effective at getting them to move away as well as keeping newcomers from moving in. Nesting females prefer dry soil, so moist soil will keep them away and cause the colony to relocate.

I learned that a bee is a bug with branched hair, that lives on plant pollen or on those of their relatives who gather and store it. Bees are hard working or lazy, social or solitary, builders or freeloaders, producers of nectar and honey or parasites. They remind me of many primates that I've met over the years.

Another common idea is that bees are attracted to the color yellow, so if you have a red feeder, bees won't see it. But, the truth is, any color feeder can attract all sorts of insects. If the separate feeder you put for bees is yellow, and your hummingbird feeder is red, then it could work. 3.

### **How to Keep Bees Away From Hummingbird Feeders**

The only solution to why the bees landed on the empty space where the hive used to be located lies in the idea that the bees were using a navigation system that told them exactly where their hive used to be.
