The 6 Benefits of Social Media in Healthcare

Previous studies on social media use in healthcare identified different effects of social media use by patients for health related reasons within the healthcare system. Social media can serve as an aid to patients.

Social media use in healthcare: A systematic review of ...

Within healthcare, recent estimates of social media usage by doctors has risen dramatically from 41% in 2010 to 90% in 2011, while rates of use have been found to be above 90% for medical students. Furthermore, a growing majority of modern patients – particularly those with chronic conditions – are seeking out SM and other online sources to acquire health information, connect with others affected by similar conditions, and play a more active role in their healthcare decisions.

Dangers and opportunities for social media in medicine

Social media use by patients can also be an aid to healthcare professionals by providing a tool to strengthen the organization's market position [3, 4] and stimulating conversation for brand building and improved service delivery [4, 5]. In fact, social media may have effects on both patients, and on the wider healthcare system [6].

Structural factors create opportunities for further growth. Healthcare lags behind other industries on digitization. This tardiness is due partly to the difficulty of managing the range of stakeholders, regulations, and privacy concerns involved in digitizing records and processes that affect sensitive information. ² However, the industry will soon have no choice but to catch up—fast.

Private equity opportunities in healthcare tech | McKinsey

Despite increasing interest in research on how to translate knowledge into practice and improve healthcare, the accumulation of scientific knowledge in this field is slow. Few substantial new insights have become available in the last decade. Various problems hinder development in this field. There is a frequent misfit between problems and approaches to implementation, resulting in the use of ...
