Study-ready aged C57BL/6J males and females are available off-the-shelf between 25 - 78 weeks of age. Aged C57BL/6J mice have research applications that include immunology, cancer, longevity interventions, and biomarker studies. C57BL/6J is the most widely used inbred mouse strain and the first to have its genome sequenced. C57BL/6J mice are resistant to audiogenic seizures, have a relatively ...

Aged C57BL/6J Mice - JAX - The Jackson Laboratory

Male infertility refers to a male's inability to cause pregnancy in a fertile female. In humans it accounts for 40-50% of infertility. It affects approximately 7% of all men. Male infertility is commonly due to deficiencies in the semen, and semen quality is used as a surrogate measure of male fecundity.
