Geodiversity and Biodiversity of the Postglacial Landscape ...

Geodiversity – the natural range of geological, geomorphological and soil features – is one of the main research topics of RFASE. Most of our work revolves around geomorphological mapping, and a related method for assessing the value – the geoconservation potential – of the mapped landforms has been developed. Results of this work are presented in the book Geodiversity of Vorarlberg and Liechtenstein by Seijmonsbergen et al. (2014).
