The possibility of doing some of the model building with a diagram makes network models a special category of linear programs. This chapter describes three types of special network problems such as transportation, assignment and transshipment that illustrate the use of flow diagrams as visual aids.

Linear Programming: Network Models - Optimization Modeling ...

Many business problems involve flows through a network - transportation, stages of an industrial process, routing of data. Students taking this course learn to specify and implement optimization models that solve network problems (what is the shortest path through a network, what is the least cost way to route material through a network with multiple supply nodes and multiple demand nodes).
