Here is an example of the differences. When our service desk does a simple count of the number of issues reported in a day, we have a measure. If that measure is compared to previous results of the same measure, we have a metric. If those metrics are compared against a point in time measure, that point in time measure is our baseline.

Example 3. For the previous example, the change in the standard entropy,  $\Delta S^\circ$ , for the synthesis of carbon dioxide from graphite and oxygen, use the previously calculated  $\Delta S^\circ_{\text{sys}}$  and standard enthalpy of formation values to determine  $S^\circ_{\text{surr}}$  and  $\Delta S^\circ_{\text{universe}}$ .

Solution. First we should solve for the  $\Delta H^\circ_{\text{sys}}$  using the standard enthalpies of formation values:

Measuring changes in mass may also be suitable for other types of reactions.

**Precipitation Reactions.** In a reaction in which a precipitate is formed, the amount of precipitate formed in a period of time can be used as a measure of the reaction rate. For example, when sodium thiosulphate reacts with an acid, a yellow precipitate of sulfur is formed.

A thermometer is a device that measures temperature or a temperature gradient (the degree of hotness or coldness of an object). A thermometer has two important elements: (1) a temperature sensor (e.g. the bulb of a mercury-in-glass thermometer or the pyrometric sensor in an infrared thermometer) in which some change occurs with a change in temperature; and (2) some means of converting this ...
