Multiphase Flow In Polymer Processing

Description. Multiphase Flow in Polymer Processing focuses on dispersed and stratified multiphase flow in polymer processing. This book explores the rheological behavior of multiphase (or multicomponent) polymeric systems as they are involved in various fabrication operations. It also outlines the importance of the morphological states of multiphase polymeric systems to explain the systems, rheological behavior in the fluid state, and mechanical behavior in the solid state.

It also outlines the importance of the morphological states of multiphase polymeric systems to explain the systems, rheological behavior in the fluid state, and mechanical behavior in the solid state. This monograph consists of eight chapters divided into two parts. After discussing dispersed and stratified multiphase flow in polymer processing, it introduces the reader to the fundamentals of rheology.

Multiphase Flow in Polymer Processing - 1st Edition

Abstract. Two types of multiphase flow may be distinguished on the basis of their degree of phase separation. One type is dispersed multiphase flow, in which one or more components exist as discrete phase, dispersed in another component forming the continuous phase. The other type is stratified multiphase flow, in which two or more components form continuous phases separated from each other by continuous boundaries.

In fluid mechanics, multiphase flow is the simultaneous flow of materials with two or more thermodynamic phases. Virtually all processing technologies from cavitating pumps and turbines to paper-making and the construction of plastics involve some form of multiphase flow. It is also prevalent in many natural phenomena.

The crystallization behavior in multiphase polymer system is more complex than in single-component polymer system. In the multiphase polymer systems, the crystallization kinetics depends on the degree of miscibility between components, thermal history, processing conditions, size, shape, and degree of dispersion of reinforcement.
