Philosophy Organon Tsunami One And Tsunami Two

A tsunami is a catastrophic ocean wave that is usually caused by a submarine earthquake, an underwater or coastal landslide, or the eruption of a volcano. Tsunamis can also result from the impact of a meteor or comet in a body of water. The word tsunami in Japanese means "harbor wave."

What Causes Tsunamis? | Britannica

The tsunami killed at least 225,000 people across a dozen countries, with Indonesia, Sri Lanka, India, Maldives, and Thailand sustaining massive damage. Indonesian officials estimated that the death toll there alone ultimately exceeded 200,000, particularly in northern Sumatra's Aceh province. Tens of thousands were reported dead or missing in Sri Lanka and India, a large number of them from ...

Also keep in mind that a small tsunami on one beach can be a big one on a nearby beach. Underwater topography can play a massive role. Buildings are no protection against a tsunami.

What are tsunamis and how they form - ZME Science

When the ocean floor moves enough, the surface finds out about it — in the resulting tsunami. A tsunami is a series of ocean waves generated by large movements or disturbances on the ocean's floor. The causes of these disturbances include volcanic eruptions, landslides, and underwater explosions, but earthquakes are the most common. Tsunamis can occur close to the shore or travel thousands ...

The 10 Deadliest Tsunamis of All Time - ThoughtCo

The resulting tsunami reached India and Sri Lanka, where at least one person was killed, and the waves were felt as far away as South Africa. All told, an estimated 40,000 lives were lost, with most of those deaths attributed to the tsunami waves. A lasting reminder of the calamitous event has long been the remaining volcano, Anak Krakatoa.
