Quick Guide Oracle Data Guard

An Oracle database operates in one of two roles: primary or standby. Using Data Guard, you can change the role of a database using either a switchover or a failover operation. A switchover is a role reversal between the primary database and one of its standby databases. A switchover ensures no data loss. This is typically done for planned maintenance of the primary system.

Introduction to Oracle Data Guard

Oracle Data Guard provides a comprehensive set of services that create, maintain, manage, and monitor one or more standby databases to enable production Oracle databases to survive disasters and data corruptions. Oracle Data Guard maintains these standby databases as copies of the production database.

Introduction to Oracle Data Guard

Basics of Oracle 12c's Data Guard. By

Chris Ruel, Michael Wessler. Data Guard is Oracle 12c's true disaster protection technology. In it, you have a minimum of two databases, primary and standby. Data Guard has options for multiple standby sites as well as an active-active configuration. By active-active, it means both/all sites are up, running, and accessible.
