The legacy of these decisions remains as streams are largely absent from urban areas. As a result of stream burial, urban and suburban areas lose the benefit of a highly important service provided by streams - nutrient pollution reduction - which is highly sensitive to alterations in land use, yet vital to keep our water clean.6

## **Breathing Life into Urban Streams and Communities**

J.N. Murdock, in Encyclopedia of Ecology, 2008. Ecological stream restoration is the return of a stream ecosystem's structure and function to a state that is more reflective of its predisturbance form. Ecological engineering principles, which focus on ecosystem self-design and self-organization, are often used in stream restoration projects because of its ecologically based procedures and goals.
