Single-Case Designs - SAGE Research Methods

In design of experiments, single-subject design or single-case research design is a research design most often used in applied fields of psychology, education, and human behavior in which the subject serves as his/her own control, rather than using another individual/group. Researchers use single-subject design because these designs are sensitive to individual organism differences vs group designs which are sensitive to averages of groups. The logic behind single subject designs is 1 Prediction,

In summary, the various forms of single case study analysis can – through the application of multiple qualitative and/or quantitative research methods – provide a nuanced, empirically-rich, holistic account of specific phenomena.

The Advantages and Limitations of Single Case Study Analysis

A single case study in the qualitative sense is used in contrast to the multiple case study design. A single case study in this sense refers to an in-depth exploration of one research subject using qualitative methods, like interviews, think-alouds, consulting historical and archival records, and so on, depending upon your field of study. A single case study in the quantitative sense, also commonly c.

The single case study is the most basic form of case-oriented research, but researchers may also conduct a series of case studies, each study building on the previous, or conduct simultaneous studies of several instances of the same phenomenon (as in comparative research). The key commonality of these different case-oriented approaches is that the researcher makes an effort to understand each case included in the study separately, as an interpretable entry.

The Argument for and Against the Case Study Research Design. Some argue that because a case study is such a narrow field that its results cannot be extrapolated to fit an entire question and that they show only one narrow example. On the other hand, it is argued that a case study provides more realistic responses than a purely statistical survey.
