Chapter 3: The Small Group as a System Flashcards | Quizlet

Small groups as complex adaptive systems contain rich dynamic relationships and complex feedback loops with nonlinear effects. Added to this is the continuum from highly organized to highly disorganized structure and it becomes clear that we cannot make long-term forecasts and predictions in small group behaviors.

As well as coupling rules, the dynamic network of a complex system is important. Small-world or scale-free networks which have many local interactions and a smaller number of inter-area connections are often employed. Natural complex systems often exhibit such topologies.

An analysis of the number of unique connections between members of small groups shows that they are deceptively complex. For example, within a six-person group, there are fifteen separate potential dyadic connections, and a twelve-person group would have sixty-six potential dyadic connections (Hargie, 2011).
