Stone Tools in Human Evolution: Behavioral Differences

...

The earliest stone tools we know of date to 3.3 million years ago, made by unknown human ancestors in Africa. Stone working was a key technology as hominins spread throughout the world, and remained so until the Iron Age, which began about 3,000 years ago. After that, their use started to decline in some parts of the world.

Australian archaeologists dropped the term Stone Age ...

In addition, human evolutionary scholars have previously thought that the advent of stone tools was linked to, or triggered by, a climate change involving a spread of savannah grasslands, and the subsequent “evolution of large groups of animals that could serve as a source of food for human ancestors,” writes Phys.org.
