For effective straw bale gardening: Use straw, not hay. Hay is made from alfalfa and grasses that still have the seeds attached, and these seeds will turn into weeds when they germinate and sprout. Straw, on the other hand, is comprised of the leftover stalks of grains such as oats and wheat—after the seeds have been removed through harvesting.

## **How to Start a Straw Bale Garden - The Spruce**

He says straw-bale gardening can be done practically anywhere, even in small spaces, as long as the bales are stable. Overwatering is difficult, as the bales are natural filters, but bound bales also retain moisture well in dry climates. They generate their own warmth when properly prepped, allowing for longer growing seasons and more plant production. Since garden weeds largely come from seeds existing in ground soil or manure, the need to weed is dramatically lessened with straw bales.
