TestStand and .NET Framework Compatibility - NI

The TestStand Engine defines a set of Engine callbacks and invokes the Engine callbacks at specific points during execution. Use Engine callbacks to configure TestStand to call certain sequences at various points during a test, including before and after the execution of individual steps, before and after interactive executions, after loading a sequence file, or before unloading a sequence file.

Using Callbacks in NI TestStand - NI

TestStand automatically releases the reference to the object when the property loses scope. For example, when a sequence local variable contains a reference to an object, TestStand releases the reference when the call to the sequence completes. You can also release the reference to the object by assigning the property a new value or the constant Nothing.
