The Air Travel Trigger Effect Deliveredonline Guides [EBOOK]

When an airplane climbs or descends, the air pressure changes rapidly. The eustachian tube often can't react fast enough, which causes the symptoms of airplane ear. Swallowing or yawning opens the eustachian tube and allows the middle ear to get more air, equalizing the air pressure. Ear barotrauma can also be caused by: Scuba diving

Air travel worldwide is growing at more than 6% a year, outpacing the reduction in per-passenger carbon emissions gained from efficiency measures. Building airports and infrastructure. Not all the environmental impact of air travel comes from the flying, as airports themselves have high carbon footprints. All the surrounding infrastructure ...

The environmental impact of air travel - Bergensia

Emissions from flights stay in the atmosphere and will warm it for several centuries. Because aircraft emissions are released high in the atmosphere, they have a potent climate impact, triggering chemical reactions and atmospheric effects that heat the planet. A quarter of all emissions could be from flying by 2050
