The Living Planet David Attenborough

David Attenborough examines the ecology and biodiversity of each of Earth's major biomes, and warns of the dangers of humanity's current industrial life. Camera work is extraordinary, and all continents are visited at least once. Written by Jason A. Cormier Plot Summary | Plot Synopsis

The Living Planet (TV Series 1984-) - IMDb

"The Living Planet" was the second in David Attenborough's "Life" trilogy of documentary series. The first, "Life on Earth", told the story of the evolution of the various major taxa- insects, fish, reptiles, etc. "The Living Planet" looks at the Earth's major habitats and the animals and plants that inhabit them.

The Living Planet: David Attenborough, Illustrated with ...

The Living Planet: A Portrait of the Earth is a BBC nature documentary series written and presented by David Attenborough, first transmitted in the UK from 19 January 1984. The sequel to his pioneering Life on Earth, it is a study of the ways in which living organisms, including humans, adapt to their surroundings. Each of the twelve 55-minute episodes (one fewer than his previous series) featured a different environment.

The Living Planet - Wikipedia

The film gives dramatic visual reinforcement to this week's Living Planet Index report, which warned that continued loss of natural habitats increases the risk of future pandemics as humans come into ever-closer contact with wild animals. Attenborough also portrays the world's last two northern white rhinos, a mother and daughter in Central Africa.
