MathFiction: The Parrot's Theorem (Denis Guedj)

Pierre agreed with what Max had broadcast and called it "Thales' theorem" and explained its importance: [page 29, 30] "Objects which look similar to each other have the same form. If proportions are conserved, then the form is conserved — in fact, you might more accurately say that form is what is conserved when dimensions are changed but proportions maintained."

The cover of The Parrot's Theorem makes many promises about this being a renaissance-style novel, a "European" novel, and so on, but this is not a book suited for average kids or even many adults. Yet, simply on the material covered, it is much more palatable than sitting down with Euclid's Elements or Newton's works.
