Arguments turn our data into knowledge and then prompt decisions and actions. When we're making an argument, we're aiming to demonstrate that some piece of information is true or false or that some action is positive or negative. In order to make effective arguments, it's helpful to understand how an argument is structured.

Reasoning About Data. Roger Peng 2017/11/16. In my ongoing discussion in my mind about what makes for a good data analysis, one of the ideas that keeps coming back to me is this notion of being able to "reason about the data". The idea here is that it's important that a data analysis allow you to understand how the data, as opposed to other aspects of an analysis like assumptions or models, played a role in producing the outputs.

Reasoning About Data - Simply Statistics

Thus our thinking will be defective and harmful if it is not based on correct data or information. Our biases, prejudices and beliefs sometimes do not enable us to think logically. We make wrong conclusion because of our prejudices, hence we are inclined to ignore and overlook those facts which support right conclusion.
