standard for tread wear simulation by simulating real world tread wear faster and with more repeatability than alternative methods. How? By accurately and precisely reproducing the forces and motions a tire experiences on the road. When you need speed, precision, repeatability, and dependability, MTS will help you move your tread wear testing

So, if you start with a new tire tread depth of  $10/32$ ", the actual usable tread depth is  $8/32$ ". When tires wear down to  $2/32$ ", they've reached a point at which they're unable to meet the challenges associated with driving on wet, slushy or snow-covered roads. They also become prone to heat damage in hot weather and are susceptible to flats ...
