The sine wave (from the first trig equation) is zero at 0°, 180°, and 360°. But, in the original exercise, 360° is not included, so this last solution value doesn't count, in this particular instance. The cosine (from the second trig equation) is  $\frac{1}{2}$

Trigonometry is an important tool for evaluating measurements of height and distance. It plays an important role in surveying, navigation, engineering, astronomy and many other branches of physical science. Basic Trigonometry involves the ratios of the sides of right triangles. The three ratios are called tangent, sine and cosine.

Trigonometric identities are true for all replacement values for the variables for which both sides of the equation are defined. Conditional trigonometric equations are true for only some replacement values. Solutions in a specific interval, such as  $0 \leq x \leq 2\pi$ , are usually called primary solutions.
