Turing Test

The Turing test, originally called the imitation game by Alan Turing in 1950, is a test of a machine's ability to exhibit intelligent behaviour equivalent to, or indistinguishable from, that of a human. Turing proposed that a human evaluator would judge natural language conversations between a human and a machine designed to generate human-like responses.

Turing Test in AI - Javatpoint

A Turing test is a test performed to determine a machine's ability to exhibit intelligent behavior. The basic concept behind the test is that if a human judge is engaged in a natural language conversation with a computer where he cannot reliably distinguish machine from human, the machine passes the test. Responses from both participants in the conversation are received in the form of a text-only channel.
