Video compression

Download Free Video Encoding By The Numbers

involves conducting calculations and analyses that determine how to reduce the file size of a digital video. Video compression is using encoding to reduce the size of a digital video file.. It analyzes the content of a video to reduce the overall file size by determining which frames are essential and which can go.

When you set an average bitrate, the encoder will vary the number of bits given to any one portion of the video, but try to keep everything at the average you set. The video bitrate can be set on the "Video Tab" It is recommended that you use 2-Pass encoding. This will provide better quality and better bit-rate distribution.
